PROFILE SUMMARY

Senior Backend Engineer with 3.5+ years of experience designing and building scalable serverless systems on AWS. Expertise in developing high-performance REST APIs using Node.js, AWS Lambda, API Gateway, and DynamoDB. Experienced in building AI-powered backend platforms using AWS Bedrock, implementing secure authentication with AWS Cognito, and designing event-driven architectures using SQS and EventBridge. Strong focus on performance optimization, clean architecture, and delivering reliable, production-grade backend systems.

WORK EXPERIENCE

Mobil80 Solutions and Services Pvt. Ltd. **Jun 2022 - Present**
Backend Software Developer (AWS & Node.js)
Project Lead - ServiceWRK & PharmaWRK & Intervwd

- Designed and implemented scalable, multi-tenant backend systems for ServiceWRK, PharmaWRK, and Intervwd using AWS serverless architecture.
- Developed high-performance REST APIs using Node.js, AWS Lambda, API Gateway, DynamoDB, and S3, ensuring scalability, reliability, and cost efficiency.
- Built an AI-powered interview platform (Intervwd) using AWS Bedrock, enabling automated interview workflows and AI-based candidate evaluation and scoring.
- Architected secure authentication and authorization using AWS Cognito with OTP-based login for web and mobile users.
- Optimized DynamoDB schema design, indexing strategies, and query patterns to improve API response time and overall system performance.
- Designed event-driven workflows using AWS SQS and EventBridge to enable asynchronous processing and enhance system scalability.
- Implemented centralized logging, monitoring, and error handling using AWS CloudWatch to ensure high availability and production reliability.
- Automated workflow processes including PDF report generation and notification systems using AWS Lambda, SES, and SNS to streamline communication and reduce manual effort.

PROJECTS

ServiceWRK (servicewrk.com)

- Designed and developed a multi-tenant SaaS platform enabling independent client environments within a shared AWS serverless architecture.
- Built a backend-driven intelligent ticketing system that converts service requests from WhatsApp, Email, and Phone into structured, actionable tickets.
- Implemented dynamic ticket assignment logic to automatically allocate tickets based on engineer availability and location.
- Developed automated warranty tracking and AMC/CAMC lifecycle management scheduled service reminders.
- Architected a multi-stage ticket workflow engine to track ticket status, approvals, and resolution lifecycle end-to-end.
- Integrated inventory and spare parts management modules to improve service visibility and operational efficiency.

PharmaWRK (pharmawrk.com)

- Designed and developed a real-time backend system to track pharmaceutical representatives' field activities using location and event-based data processing.
- Built scalable APIs to manage territory allocation, resource distribution, and activity tracking across multiple regions.
- Designed data models and optimized database queries to provide structured visibility into doctor, pharmacist, and stockist follow-ups.
- Implemented location-based activity intelligence for performance monitoring and compliance analysis.
- Developed backend services supporting mobile application features such as visit planning, routing optimization, and scheduling.
- Architected secure, scalable serverless infrastructure on AWS to ensure high availability and performance.

Intervwd (intervwd.com)

AI-Powered Interview Platform

- Architected and developed an AI-driven interview platform using AWS Bedrock, enabling automated interview workflows and intelligent candidate evaluation.
- Integrated foundation models via AWS Bedrock to dynamically generate role-specific interview questions based on job descriptions and skill sets.
- Implemented AI-based response analysis to evaluate candidate answers and generate structured scoring and feedback reports.
- Built scalable serverless backend APIs using Node.js, AWS Lambda, API Gateway, and DynamoDB to manage interview sessions, responses, and evaluation pipelines.
- Designed optimized DynamoDB schemas to efficiently store interview metadata, session data, and AI-generated insights.
- Automated post-interview report generation with AI-powered summaries, reducing manual review effort and improving turnaround time.
- Ensured secure, role-based access control and scalable infrastructure using AWS best practices and event-driven architecture.

TECHNICAL SKILLS

Programming: JavaScript (ES6+), Node.js

Backend Development: Express.js, REST APIs, Event-Driven Architecture, Webhooks, Authentication & Authorization, Real-time Messaging (MQTT)

Cloud & Serverless (AWS): AWS Lambda, API Gateway, DynamoDB, S3, AppSync (GraphQL), Cognito, SES, SNS, SQS, EventBridge

Database & Storage: MongoDB, DynamoDB, NoSQL Data Modelling, Indexing & Query Optimization

DevOps & Infrastructure: AWS SAM, CloudFormation

Monitoring & Security: CloudWatch, IAM Policies, Logging & Tracing, Error Handling, Application Security Best Practices.

Frontend (Working Knowledge): React.js, Tailwind CSS, HTML5, CSS3

Integrations & Tools: VS Code, Postman, Git, Razorpay Payment Gateway (Webhooks, Signature Verification)

EDUCATION

Bachelor of Engineering (B.E.) – Electronics and Communication Engineering

Govt. Engineering College, Ramanagaram | **Graduated: 2020**
